Forward

Standardization is considered as one of the most important indicators for development. Its new scopes reflects the scientific development and enhances the process of technology transfer. Standardization has many advantages, but in general, it protects the consumer and the national economic interests and ensures compatibility between producers on the national, regional and international levels.

Standardization plays a vital role in the different aspects of development activities and enhances the development of all aspects of science, technology, industry and trade. Also standardization facilitates the exchange of goods at regional and international levels and also it helps in the industrial integration and coordination. Therefore, harmonization of standards at all levels is essential.

Hence a center of standardization and metrology was established within the framework of the Arab Industrial Development and Mining Organization (AIDMO) to promote coordination in the field of standardization in the Arab countries. The objectives of this center include the following:

- a) Standardization of codes, symbols, technical terms, definitions, technical classifications, methods of examination, analysis and measurement.
- b) Issuing unified Arab standard specifications for materials, raw materials, products, equipment and codes of practice, all in the light of international specifications while taking into consideration Arab circumstances.
- c) Training and qualifying Arab cadres in the field of specifications, measurements, quality control, and analysis and test methods.
- d) Issuing approving and registering of marks and symbols which indicate the conformity of materials, commodities, raw materials, products, machinery and equipment, to the Arab standards specifications, as well as issuing the systems related to the conditions for the use of the signs of conformity.
- e) Helping the Arab countries to establish their own national standardization bodies and to promote the development of these bodies for the protection of the consumer and improvement of quality.

The high consultative committee for standardization was established to help AIDMO Center of Standardization. This committee which is composed of the general directors of the Arab National Standards Bodies meets twice a year. The main duties of this committee are the establishment, amalgamation or cancellation of Arab regional Technical Committees, the adoption of their working programs, and the adoption of the Final Drafts of AIDMO Standards which will be adopted by the Ministerial Council as unified Arab Standards (AIDMO) / Standards).

This catalogue contains all AIDMO Standards issued up to the year 2000, and we hope that it will be a useful tool for all parties concerned in industry, trade and for all the workers in the field of standardization and metrology.

The catalogue includes a number of indexes, namely, numerical index of AIDMO standards, technical committee index, international classification system (ICS) index, subject index and alphabetical index.

We believe that this Catalogue will serve the interests of different economic aspects of all parties concerned in the Arab region.

Forward

Standardization is considered as one of the most important indicators for development. Its new scopes reflects the scientific development and enhances the process of technology transfer. Standardization has many advantages, but in general, it protects the consumer and the national economic interests and ensures compatibility between producers on the national, regional and international levels.

Standardization plays a vital role in the different aspects of development activities and enhances the development of all aspects of science, technology, industry and trade. Also standardization facilitates the exchange of goods at regional and international levels and also it helps in the industrial integration and coordination. Therefore, harmonization of standards at all levels is essential.

Hence a center of standardization and metrology was established within the framework of the Arab Industrial Development and Mining Organization (AIDMO) to promote coordination in the field of standardization in the Arab countries. The objectives of this center include the following:

- a) Standardization of codes, symbols, technical terms, definitions, technical classifications, methods of examination, analysis and measurement.
- b) Issuing unified Arab standard specifications for materials, raw materials, products, equipment and codes of practice, all in the light of international specifications while taking into consideration Arab circumstances.
- c) Training and qualifying Arab cadres in the field of specifications, measurements, quality control, and analysis and test methods.
- d) Issuing approving and registering of marks and symbols which indicate the conformity of materials, commodities, raw materials, products, machinery and equipment, to the Arab standards specifications, as well as issuing the systems related to the conditions for the use of the signs of conformity.
- e) Helping the Arab countries to establish their own national standardization bodies and to promote the development of these bodies for the protection of the consumer and improvement of quality.

The high consultative committee for standardization was established to help AIDMO Center of Standardization. This committee which is composed of the general directors of the Arab National Standards Bodies meets twice a year. The main duties of this committee are the establishment, amalgamation or cancellation of Arab regional Technical Committees, the adoption of their working programs, and the adoption of the Final Drafts of AIDMO Standards which will be adopted by the Ministerial Council as unified Arab Standards (AIDMO) / Standards).

This catalogue contains all AIDMO Standards issued up to the year 2000, and we hope that it will be a useful tool for all parties concerned in industry, trade and for all the workers in the field of standardization and metrology.

The catalogue includes a number of indexes, namely, numerical index of AIDMO standards, technical committee index, international classification system (ICS) index, subject index and alphabetical index.

We believe that this Catalogue will serve the interests of different economic aspects of all parties concerned in the Arab region.
